

PADLOCK 38MM ALUMINIUM KEYED DIFFERENT

Enhance the safety and security of your industrial environments with our 38mm Aluminum Body Safety Lockout Padlocks, now available in a set of 10 with each padlock keyed differently. These padlocks combine a sturdy aluminum body with a resilient steel shackle, offering superior protection and resistance to cutting and tampering. Each lock in the set opens with its own unique key, allowing for individualized control and access, making them ideal for situations where personalized security is paramount.

- High Strength Material:
- Sized Perfectly for LockOut Boxes
- Keyed Differently
- Durable
- Wide Range of Applications:
- Multiple Color Options:

Material: Each padlock features a durable aluminum body and a robust steel shackle to resist corrosion, cutting, and environmental damage.

Size: The compact 38mm body is designed to fit most lockout applications, with a shackle thick enough to secure equipment firmly.

Keyed Differently: Each padlock requires a unique key, enhancing security by preventing cross-access among users.

Durability: Engineered to withstand industrial conditions, including exposure to chemicals and extreme temperatures.

Applications: Perfect for securing electrical panels, machinery, isolation points, and valves in areas where different individuals need access to specific locks.

Color Options: Available in various colors to facilitate a cohesive lockout tagout system, helping to avoid accidental equipment operation.

Ideal for: Facilities that require stringent control over individual access points, such as multi-departmental industrial plants, utilities, and construction sites. Maximize safety and compliance with these high-quality, individually keyed lockout padlocks, tailored for environments where security customization is crucial.
